**Dinosaur Country Unearthing The Badlands Prehistoric Past**

...and what paleontologists do when they find them. And discover dinosaurs' avian legacy and Alberta's official provincial "dinosaur" — the great horned owl. Featuring paleoart by Julius Csotonyi, over seventy-five photos and illustrations, and profiles of leading paleontologists, Dinosaurs of the Alberta Badlands showcases Alberta's prehistoric beasts, not as participants in a parade of isolated monsters, but as animals adapted to be part of the unique physical and biological environment.

For each date in the calendar year, the author identifies events relating to dinosaurs that happened in various years, including the birthdates of scientists, discoveries, and opening of dinosaur exhibits... Bolt, "the old fossil hunter," proved to be a more important force than he realized. His unique skills as a field collector enabled him to find and collect fossils that would otherwise remain hidden. In fact, it was Bolt's work that led to the discovery of the Dinosaur Park beds in Alberta. The Dinosaur Provincial Park beds are one of the richest and best-preserved fossil deposits in the world, and the fossils they contain provide a wealth of information about the prehistoric world. Science fiction writer Donald Glut describes the calendar as "a successful attempt to present a comprehensive view of the field of science fiction, with an emphasis on the work of the past thirty years."
