Geologic Time Scale 2020 Felix M. Gradstein 2020 Geologic Time Scale 2020 (2 volume set) contains contributions from 80 leading scientists who present syntheses in an easy-to-understand format that includes numerous color charts, maps and photographs. In addition to detailed overviews of chronostratigraphy, evolution, geomorphology, sequence stratigraphy and planetary geology, the GTS 2020 volumes have separate chapters on each geologic period. The GTS 2020 volume is divided into the current GSSPs (global boundary stratotypes), detailed biochronostratigraphic charts. The book is intended for advanced geology students, researchers and teachers with a background in stratigraphy and an interest in using computer-based techniques. The book introduces the basics of dating, the range of techniques available for the construction of a biozonation based on stratigraphic events, (such as the last appearance datum of a fossil species), and for automated correlation. The book also introduces the concept of time in Quaternary Science and related fields the history of dating from lithostratigraphy and biostratigraphy the development and application of radiometric methods different methods in dating radiometric data with applications to the construction of a clear and straightforward manner with the minimum of technical detail, this text is a great introduction. The book also includes the results of current research on sea floor spreading. The book includes the results of current research on sea floor spreading. Encyclopedia of Human Evolution and Prehistory. Eric D. Delson 2004-11-23 Praise for the first edition: "The most up-to-date and wide-ranging encyclopedia work on human evolution available."--American Reference Books Annual. "For student, researcher, and teacher...the most complete source of basic information on the subject. ..."--Nature. The second edition expands the coverage of prehistory and prehistory and includes new and updated information about the evolution of the human species. The Encyclopedia of Human Evolution and Prehistory is a comprehensive resource that provides an introduction to the latest research and discoveries in the field. The book includes over 500 entries, each with a short summary of the key developments, and a detailed bibliography. The Encyclopedia of Human Evolution and Prehistory is the definitive resource for anyone interested in the study of human evolution and prehistory.

The Jurassic of the Circum-Pacific. Greg E. Westermann 2005-09-15 This work presents an overview of the Jurassic period in the Circum-Pacific region, including a comprehensive summary of the geological and biological events of the time. The book is divided into four parts: the geology of the Circum-Pacific, the biology of the Jurassic, the impact of climate on the Jurassic, and the evolution of the Mesozoic Era. This book is an essential resource for students, researchers, and practitioners in the field of geology, paleontology, and earth science.

The Geologic Time Scale 2004 Felix M. Gradstein 2004 A new detailed international geologic time scale, including methodology and a wallchart. Sequence Stratigraphy of the Lower Miocene Moghra Formation in the Qattara Depression, North Western Desert, Egypt. Sariya M. Hassan 2013-06-12 The Qattara Depression is a large, depression located in the Western Desert of Egypt. It is known for its rich fossil record and its role in the study of Late Miocene paleoenvironments. The book includes a comprehensive overview of the geology of the area, with a focus on the sequence stratigraphy of the Moghra Formation. The book is intended for geologists, paleontologists, and students with an interest in the study of the Late Miocene.
