In place of grass-fed meat, grass-fed dairy products, and eggs from hens running on pasture, we now mostly eat grain-fed meat and processed factory foods – and we’ve witnessed an epidemic of disease, from type-2 diabetes to heart disease and cancer. Modern agriculture has locked us into an unhealthy, vicious circle, with degraded foods pouring from an overstretched, impoverished landscape. There’s a simple remedy: the grass-fed movement. We can make sure that the meat, dairy foods and eggs we buy come from animals grazing on or running in pasture, as they always used to. This will also put life back into our soils and wildlife back onto our farmland. Graham Harvey, agricultural advisor to BBC Radio 4’s The Archers, lays out all the arguments for grass-fed food – why it’s good for us, and why it’s good for the planet. screams filled his head. Deadly shapes bore down. Animal and man driven by one single thought. Kill or be killed. Neither wanted to die. Falsely accused of a terrible crime, impetuous young aristocrat Lord Dallas Acheson is forced to flee his native Scotland, leaving behind the only woman he has ever loved—Lady Lorna de Iongh. From that day onwards, he must learn to live a different life in a land where danger is an ever-present partner. Fate takes him to southern Africa and the emerging seaport of Durban, from where he sets off to trade and hunt, seeking his fortune in the little-travelled midlands of Natal and the wilds of Zululand. Tested to the limit, Dallas discovers more than he could have imagined.
Married to a woman he doesn't love, he yearns to abandon the restraints of nineteenth-century society to be with Lorna. And when the Zulu war breaks out, finds himself torn between old and new loyalties, required to be an enemy of the land that is now his true home.

Golden Grain. and Bread and Cheese and Kisses is a collection of Christmas stories written by B. L. Farjeon. Farjeon was an English novelist, playwright, printer and journalist. Excerpt: “Delicate feather-flakes of snow were floating gently down over all the City. In some parts the snow fell white and pure, and so remained for many hours. In other parts, no sooner did it reach the ground than it was converted into slush--losing its purity, and becoming instantly defiled. This was its fate in Stoney-alley; yet even there, as it rested upon the roofs and eaves, it was fresh and beautiful for a time.”

Equines Do Not Live for Grass Alone Maasa Nishimuta 2020
Most horse training methods heavily rely on negative reinforcement and punishment. However, there is a movement in the horse community to utilize positive reinforcement to meet training goals. Although food has been used effective as a reinforcer with horses, social interaction has also been demonstrated to function as a positive reinforcer for animals. Utilizing social interaction as a reinforcer may lead to several benefits for both the trainer and animal. Some of the benefits can be improved relationships between animals and their caretakers and improved animal welfare. The purpose of this study was to apply Owens and Owens et al. previous research protocols to three equines to assess if social interaction, in the form of petting and gentle scratching, would function as a reinforcer. Using a changing criterion design, this study demonstrated that petting and gentle scratching could function as a reinforcer to teach three equines to stay and come in their natural environment.
