Central topics that a critical theory informed investigator may examine include transformation of social institutions through understanding the significance of health and social life; the historical problems
of illness, power, hostility, and social struggles; and an analysis of society and envisions of new possibilities (Fay 1987, Curriculum for Registered Nursing Education Programme).

potential. Health is also the actualization of inherent and acquired human potential through goal-directed behavior, competent self-care and satisfying relationships with others. Adjustments are made along a health–illness continuum as needed to maintain structural integrity and to effect harmony with the environment.

ANTHROPOLOGY IN PRACTICE

communication, cyber world, areas of health, environment, hazards, disasters, media, new media, sports and much more. It would also focus on the methods applicable in practicing anthropology. As part of the course the learners will be provided with a detailed, in depth and critical evaluation of the pragmatic applications of anthropology.

Question paper (A-level) : Paper 2 Topics in Sociology – AQA

Others argue that mental illness is a label applied to deviant behaviour. Mental illness is socially constructed through interpretations made by others. Applying material from Item F and your knowledge, evaluate sociological explanations of the differences in rates of mental illness between social groups. [20 marks]
