The criterion of a theory is not whether it is true or untrue, but rather whether it is useful or not useful for explaining or predicting behavior. A theory is useful even though the ultimate causes of the phenomenon it encompasses are unknown. A theory can be refined, or with new information, it can take on a new direction.

tinguish between the two types of processes. Imagine a chef assigned the task of cooking dinner. There are two ways the task can be organized. In the first, the host or client picks out a menu in advance. All the chef needs to do is list the ingredients needed, shop for them, and then actually cook the meal. This is a process of causation.
