Enabling Environments for Agribusiness and Agro-industries Development Gabor Konig
2013 The existence of a conducive business climate, or enabling environment, is considered essential to engender economic growth and development. However, what "an enabling environment" should encompass in practical terms remains elusive to many scholars and policy makers, particularly when discussed at the sub-sector level. This publication examines issues associated with enabling environments with a focus on agribusiness and agro-industrial sectors, which have not had their peculiar characteristics sufficiently examined in traditional appraisals of business climates. Based on a series of workshops and consultations organized in Africa, Asia, Eastern Europe and Latin America, the report reviews existing frameworks for general enabling environment assessments and discusses their relevance to agribusiness and agro-industries. It also discusses the challenges of enabling environment reforms and identifies a number of essential, important and useful enablers that are particularly relevant to agrifood business climate appraisals and upgrading.

Titles in Series 1978
Public Enterprise Management Martin Jagdeo Boodhoo 1979
Territorial tools for agro-industry development Food and Agriculture Organization of the United Nations
2018-08-09 This sourcebook appraises these instruments and considers their nature and objectives, their potential benefits and challenges and the approaches used to implement them. It also examines the
practices that have led to both successful and unsuccessful outcomes. The publication provides a comprehensive review of the potential of these tools to enhance value addition, deliver jobs, increase exports and provide markets for new and existing producers in the targeted territories. It notes, however, that implementation of these tools poses a number of challenges. For example, planners and practitioners sometimes use them interchangeably, thus ignoring the specificities of the investments, policies and processes required, and their expected outcomes. The sourcebook concludes that these tools have potential for catalytic impact, but planners need to make sound choices that respect demonstrated principles and follow good practices for effective design and implementation.

The development of competitive agro-industries is crucial for creating employment and income opportunities as well as enhancing the quality of and demand for farm products. Agro-industries can have a real effect on international development by increasing economic growth and reducing poverty in both rural and urban areas of developing countries. However, in order to avoid adverse effects to vulnerable countries and people, sound policies and strategies for fostering agro-industries are needed. Agro-Industries for Development highlights the current status and future course for agro-industries and brings attention to the contributions this sector can make to international development. The book includes contributions from agro-industry specialists, academic experts and UN technical agencies, chapters address the strategies and actions required for improving agro-industrial competitiveness in ways that can create income, generate employment and fight poverty in the developing world. This book is a co-publication with FAO and UNIDO.
