topics within the realm of reading and writing, thinking, art, science, sociology, psychology, education, and religion. There is no formal structure to the book, except the literary sense that organizes those thoughts and observations about life. It is important to connect these various categories, as they form a coherent narrative that is ultimately about the human experience. Therefore, the book is a reflection of the author's life experiences, beliefs, and values.

Central Nervous System Medications (Shawn Wright 2015-05-31) For the future of science in this area, we now must move beyond the limits of the understanding of the brain. We now must see the world through a different lens, one that is more holistic and interrelated. The future of medical research is in the hands of those who can see beyond the boundaries of traditional medicine and into the realm of the mind-body interaction. We must embrace the scientific method and the power of collaboration to create a new paradigm for understanding the brain and its disorders.
