Communicating Projects Ann Pilkington 2016-05-23 Every programme and project manager knows that they need interaction and engagement to be truly effective, but their understanding of what good communication looks like can vary. All too often people are put into communication roles without the necessary skills or experience. Whilst there are many texts on public relations and an increasing number on internal/employee communication, programme and project communication spans a number of disciplines and has its own requirements. Communicating Projects gives programme and project communicators a framework for developing an effective strategy that goes well beyond inter-programme/project communication and looks at how to achieve behaviour change and even increase employee engagement through the process. The book follows a best practice model for communication strategy development and planning. The model is supplemented with vignettes that explore communication concepts in more detail (for example employee engagement, communication theory and persuasion). At the same time, the text follows the project lifecycle with the appropriate approaches for initiation, development and delivery stages outlined. If you accept the crucial role communication plays in securing project success then this book is a must-have guide for any project manager or anyone tasked with stakeholder engagement.

P6 Real World Scheduling John Buttelwerth 2017-08-17 P6 Real World Scheduling is called "real world" because the author wrote it drawing upon his 30+ years of experience consulting with contractors. He knows how contractors use scheduling software, what's important to them - and what is not! Tested and retested in the classroom. It will guide you through some of the quirks of P6 as well as teach you how to use the software the way contractors use it. Other software manuals are often hundreds of pages long filled with dense text that wastes your time trying to cover every corner and nuance of the software – ultimately leaving readers more confused than before they started. P6 Real World Scheduling is written for Oracle's Primavera P6 Professional software using a local or multi-user database. It was written using version 15.1, but can be applied to previous and post versions of P6 with little concern. Rest assured that it will help the reader clearly grasp the many, sometimes puzzling nuances of this "enterprise" based software, such as the use of the OBS (Organizational Breakdown Structure), the EPS (Enterprise Project Structure), the lack of traditional "save" features, user security profiles, and its uncommon import / export components. P6 Real World Scheduling assumes that the reader has no previous exposure to the software and takes the reader through the process of creating a schedule covering the same features that a contractor would include on their typical schedule. This includes creating and saving the schedule, covering numerous formatting options to customize the look of the schedule, working with calendars including 50% and 100% weather calendars, then activity coding the schedule to organize the activities into various Work Breakdown Structures. Different views of the
schedule are explored and from there the schedule is resource loaded and cost loaded, including a real world analysis of an over-allocation of resources. The schedule is then Baselined and updated covering all possible update scenarios that may actually occur. With this manual and a few hours of your time, you will be ready to effectively use Oracle’s Primavera’s P6 Professional on a real project.
