Basic & Applied Concepts of Blood Banking and Transfusion Practices - E-Book Kathy D. Blaney 2013-08-13 Using an easy-to-understand writing style, this text integrates immunohematology theory and application to provide you with the knowledge and skills you need to be successful in blood banking. Problem-solving exercises and case studies help you develop a solid understanding of all areas of blood banking. Learning objectives begin each chapter. Illustrated blood group boxes throughout chapter 6. Other Blood Group Systems, give the ISBT symbol, number, and the clinical significance of the antibodies at a glance. Margin notes and definitions in each chapter highlight important material and offer additional explanations. Chapter summaries recap the most important points of the chapter. Study questions at the end of each chapter provide an opportunity for review. Critical thinking exercises with case studies help you apply what you have learned in the chapter. UPDATED! Information and photos on automation include equipment actually used in the lab. Flow charts showing antibody detection and identification help you detect and identify antibodies. Advanced topics on Transplantation and Cellular Therapy, the HLA System, Molecular Techniques and Applications, Automation, Electronic Crossmatching, and Therapeutic Apheresis make the text relevant for 4-year MLS programs.

Les analyses immunohématologiques et leurs applications cliniques Chiaroni Jacques 2011-12-01 L'imunohematologie est une discipline de la biologie medicale qui etudie les antigene de groupes sanguins erythrocytaires et les anticorps dont ils peuvent etre la cible. L'un des objectifs premiers de cet ouvrage est de faire le point sur les differentes analyses immunohematologiques existantes. Il en decrit les objectifs, les contraintes de realisation, les exploitations possibles quant a leurs resultats, mais aussi leurs limites techniques et d'interpretation. De nombreuses « solutions techniques » sont proposees, dont certaines sont rassemblees dans un ensemble de fiches presentees a la fin de l'ouvrage. Elles permettront aux biologistes et techniciens de resoudre la plupart des problemes techniques ou biologiques rencontres. Au-delà de leur interet theorique dans le domaine de l'anthropologie genetique (non abordable dans l'ouvrage), c'est dans des circonstances cliniques bien precisees que les groupes sanguins jouent tout leur role, notamment : transfusion sanguine, grossesse,... Ces differentes domaines d'utilisation des resultats d'immunohematologie sont traitées dans la deuxième partie du livre. Enfin, dans la dernière partie du livre, les auteurs envisagent les technologies du futur en immunohematologie.
Textbook of Blood Banking and Transfusion Medicine Sally V. Rudmann 2005-02-18 This comprehensive book on transfusion practices and immunohematology offers concise, thorough guidelines on the best ways to screen donors, store blood components, ensure safety, anticipate the potentially adverse affects of blood transfusion, and more. It begins with the basics of genetics and immunology, and then progresses to the technical aspects of blood banking and transfusion. Chapters are divided into sections on: Basic Science Review; Blood Group Serology; Donation, Preparation, and Storage; Pretransfusion Testing; Transfusion Therapy; Clinical Considerations; and Safety, Quality Assurance, and Data Management. Developed specifically for medical technologists, blood bank specialists, and residents, the new edition conforms to the most current standards of the American Association of Blood Banks (AABB). Expert Opinion essays, written by well-known, frequently published experts, discuss interesting topics of research or new advances in the field. Important terms are defined in the margins of the pages on which they appear, enabling readers to easily check the meaning of an unfamiliar term where it appears in context. Margin notes highlight important concepts and points, remind readers of previously discussed topics, offer an alternative perspective, or refer readers to other sources for further information. Material conforms to the most recent AABB standards for the most accurate, up-to-date information on immunohematology. Advanced concepts, beyond what is required for entry-level practice, are set apart from the rest of the text so readers can easily differentiate between basic and advanced information. A new chapter on Hematopoietic Stem Cells and Cellular Therapy (chapter 19) provides cutting-edge coverage of cellular therapy and its relevance to blood-banking. New content has been added on molecular genetics, component therapy, and International Society of Blood Transfusion (ISBT) nomenclature, as well as the latest information on HIV, hepatitis, quality assurance, and information systems.

New England Journal of Medicine A well established and respected review of hematology *Postgraduate Haematology* is a practical, readable text which will give trainees, residents and practising hematologists up-to-date knowledge of the pathogenesis, clinical and laboratory features and management of blood disorders. *Postgraduate Haematology* is ideal for: Trainees and residents in hematology Hematologists in practice *Why Buy This Book?* A well established and respected review of hematology Practical and readable text Essential information for everyday use as well as the scientific background Up-to-date knowledge of the pathogenesis, clinical and laboratory features and management of blood disorders Complete revision of all chapters and the addition of new chapters to reflect latest advances in the speciality Hematology Rodger L. Bick 1993 *Practical Blood Transfusion* Douglas W. Huestis 1988 *Immunosensors* Minhaz Uddin Ahmed 2019-08-28 Immunosensors are widely used and are particularly important for fast diagnosis of diseases in remote environments as well as point-of-care devices. In this book, expert scientists are covering a selection of high quality representative examples from the past five years explaining how this area has developed. It is a compilation of recent advances in several areas of immunosensors for multiple target analysis using laboratory based or point-of-care set-up, for example graphene-, ISFET- and nanostructure-based immunosensors, electrochemical magneto immunosensors and nanoimprinted immunosensors. Filling a gap in the literature, it showcases the multidisciplinary, innovative developments in this highly important area and provides pointers towards commercialisation. Delivering a single, comprehensive work, it appeals to graduate students and professional researchers across academia and industry.
