New Hope For Binge Eaters Harrision G. Poop 1985 ADVANCES IN THE UNDERSTANDING AND TREATMENT OF Bulimia Holy Feast and Holy Fast Caroline Walker Bynum 1988 In the period between 1200 and 1500 in western Europe, a number of religious women gained widespread veneration and even canonization as saints for their extraordinary devotion to the Christian eucharist, supernatural multiplications of food and drink, and miracles of bodily manipulation, including stigmata and imago (living without eating). The occurrence of such phenomena sheds much light on the nature of medieval society and medieval religion. It also challenges modern conceptions of this field. Prevailing explanations for stigmata and miracles of bodily manipulation in isolation from each other and have sometimes applied modern medical or psychological theories to them. Using materials based on saints’ lives and the religious and mystical writings of medieval women, Caroline Walker Bynum brings the various approaches together to explore this aspect of medieval piety and the relgiosity and behind the fascination men and women felt for such miracles and devotional practices. She argues that food lies at the heart of much of women's piety. Women renounced ordinary food through fasting, infused ordinary food with mystical meaning, and used food as a potent means of healing through behavioral modification. Each chapter begins with the basic questions the material will try to address and a case study that applies to these issues, and ends with summarized answers, a glossary, and suggestions for further reading. The book includes discussions of the latest edition of the Substance Abuse Subtitle Screening Inventory, co-occurring disorders, and the need for a new model of substance abuse that puts primary care physicians and health professionals involved in the care of children and adolescents with major psychiatric syndromes: psychologists, social workers, therapists, nursing staff and students, medical students, pediatrics, family practitioners, and family practitioners. It will be an important test for graduate and post-graduate courses in child and adolescent psychopharmacology, as well as for pediatrics resident studying psychiatric disorders.

Casebook in Abnormal Psychology Timothy A. Brown 1997 Using cases taken from the authors' case files or from case files of other working clinicians, this casebook portrays the rich and arresting nature of disorders as they are displayed in real people. Cases illustrate every major DSM-IV category and are followed by a therapy outcome section which gives the "rest of the story" of what happened to these clients. The authors draw on an extremely current and thorough database, look at the multiple causes of disorders, and incorporate developmental and cultural issues in each case. Two complex cases are included without a diagnosis to give students an opportunity to come up with diagnoses on their own. The cases are designed to give students an appreciation for the complexity of the diagnostic process.
