city's image and its place in the hierarchy of cities. Pagano and Bowman draw on comparative data from ten medium-sized cities, which they divide into four categories: survivalist cities (high distress, high activism), expansionist cities (low distress, high activism), market cities (high distress, low activism), and maintenance cities (low distress, low activism). Examining forty city-supported development projects within these four categories, they show how city investment in, and regulation of, development projects is the most effective way for political leaders to control and shape the future of their city. The book also emphasizes the importance of comparing initial expectations and goals to results in evaluating the success of city-supported development. “A theoretically astute, methodologically sound, and policy-relevant study.” — Journal of the American Planning Association “The authors' genuinely unique contribution to our understanding of urban development— a contribution that will and should command the attention of future scholars— lies in the emphasis on the vision, image, and aspirations of urban leadership. Its wide scope makes it ideal for use in the classroom.” — Journal of Politics “Fills an important need for studies in the middle range between qualitative and quantitative research.” — American Political Science Review
