Social Work Jean A Pardeck 2020-07-25 Discover why social work must be restructured if it is to remain viable! Social Work: Seeking Relevancy in the Twenty-First Century provides you with a critical examination of the major issues that social work education and practice must confront if social work is to remain as a mainline profession. The book explores issues that are not normally covered in social work literature, such as the challenge of reconstructing the social work profession, the use of technology in social work, and the tension surrounding various social work education curriculums. You will benefit from this thorough discussion of the many problems that the social work profession is facing: a lack of scholarly research, inadequate educational programs, and the use of hypertechnology to educate social work students. Social Work: Seeking Relevancy in the Twenty-First Century examines the epistemological, theoretical, socio/technical, and practice directions that social work has branched into. You'll discover that today's central direction for social work is generated from liberal, postmodern, and increasingly feminist ideological perspectives. In a field where conceptual and theoretical input rarely allow for intellectual diversity, this volume demonstrates that several views are best for inquiry and exploration in social work. Issues discussed include: examining real or unreal social work values by separating them from beliefs, preferences, norms, attitudes, and opinions creating social work course outlines that incorporate practices developed around the globe, allowing for more conceptual and theoretical growth within the field realizing the tremendous difference between communication in the instrumental sense via technology, and in the affective, soul-oriented sense via personal interaction investigating the negative effects of communicating with hypertechnology (modems, e-mail) in the social work profession realizing the need for a greater quantity and quality of social work research to progress further in the
field Social Work: Seeking Relevancy in the Twenty-First Century invites you to reinvent social work for today’s post-industrial and post-modern era. You will discover a series of challenges that social work must meet and overcome if it is to move into the new century as a relevant and viable profession. You will explore solutions such as increasing scholarship and research among social workers, and decreasing the use of technology (for example, classes held via the Internet) in social work education programs in order to increase the quality of the social work profession.

health and wellbeing of their communities. Prevent, Repent, Reform, Revenge  Ann C. Diver-Stamnes 1995 Prevent, Repent, Reform, Revenge is a study of the aims that people intend to achieve by the sanctions and treatments they recommend for wrongdoers. The book is designed to answer two main questions: What kind of analytical scheme can profitably reveal the nature of people's reasoning about the aims of sanctions they propose for perpetrators of crimes and misdeeds? In the aims that people express what changes in overt moral reasoning patterns appear between later childhood and the early adult years? The authors conducted interviews with 136 youths between the ages of 9 and 21 to find out what sanctions and aims they felt were appropriate in three cases of wrongdoing. The resulting information provides an important insight into adolescent moral development.

Battling the Inner Dummy  David L. Weiner 2013-01-29 From the sexcapades of Bill Clinton to the unbelievable story of Hugh Grant and the prostitute; from the 15-year-old who weighs only 82 pounds but believes she's obese, to the professor who screams profanities at other drivers in snarled traffic--we wonder out loud, "What are they thinking?!" What drives so many apparently normal, intelligent people to act irrationally, harming themselves and others? According to Sigmund Freud, such behavior may be caused by the "id," our built-in mental invitation to everything from dangerous fun to horrendous acts of irrationality. For popular psychology writer David Weiner, "id" stands for "Inner Dummy," the part of the brain that we must come to understand if we are ever to know why we do foolish, irrational, and compulsive things. Drawing on the groundbreaking theories of evolutionary psychology, Battling the Inner Dummy localizes the source of our irrationality in the limbic id-the most primitive part of our brain that endlessly thirsts for status, sex, territory, nurturance, and survival. "We become captured by these drives," Weiner says. "By understanding our Inner Dummy, we can avoid disasters in our own lives." Along with sound advice from clinical psychiatrist Dr. Gilbert Hefter on how to handle our own Inner Dummies with built-in rewards and punishments, Weiner brilliantly interweaves delightful, imagined conversations with Freud and staffers at a mythical advertising agency, who have been given the assignment of communicating the nature of the id's irrationalities to the general public (e.g., t-shirts that say, "Would someone please fix my Inner Dummy before I fall in love with another idiot?" and a bathroom scale that allows you to weigh eight pounds less each time you use it). This inviting, humorous romp with Inner Dummies who have made the news illustrates how we can apply "ID prevention" in our daily lives and includes all the major strategies science and medicine have developed over the years to counter Inner Dummies that threaten our well-being. See how well you're handling your own inner dummy by taking the quizzes at www.innerdummy.com.

Story in Children's Lives: Contributions of the Narrative Mode to Early Childhood Development, Literacy, and Learning  Kelli Jo Kerry-Moran 2019-09-27 This book is based on the power of stories to support children in all areas of their lives. It examines the role narratives can play in encouraging growth in contexts and domains such as personal and family identity, creative movement, memory and self-concept, social relationships, or developing a sense of humor. Each chapter describes innovative and research-based applications of narratives such as movement stories, visual narratives to develop historical thinking, multimodal storytelling, bibliotherapy, mathematics stories, family stories, and social narratives. The chapters elaborate on the strength of narratives in supporting the whole
child in diverse contexts from young children on the autism spectrum improving their social skills at school, to four- and five-year-olds developing historical thinking, to children who are refugees or asylum-seekers dealing with uncertainty and loss. Written by accomplished teachers, researchers, specialists, teaching artists and teacher educators from several countries and backgrounds, the book fills a gap in the literature on narratives. “...this work delves into the topic of narratives in young children’s lives with a breadth of topics and depth of study not found elsewhere.” “Collectively, the insights of the contributors build a convincing case for emphasizing story across the various disciplines and developmental domains of the early childhood years.” “The writing style is scholarly, yet accessible. Authors used a wide array of visual material to make their points clearer and show the reader what meaningful uses of story “look like”. “ Mary Renck Jalongo, Journal and Book Series Editor Springer Indiana, PA, USA

Making Research Matter
Stephen Goss 2015-09-07 Making Research Matter is an original contribution to the growing field of work-based learning with a focus on research aimed at developing the practice of counselling and psychotherapy addressing the practice-research gap. Stephen Goss, Christine Stevens and their contributors explore the links between research and professional practice and show how this can impact on practice to make a genuine, demonstrable contribution to the development of therapeutic services, good practice and the understanding of psychological and social issues. The book is divided into two parts. Part one gives an account of the thinking,
ethos and development of work-based learning. It explores the importance of the in-depth rigorous and reflexive inquiry skills needed to sustain research project work. Part two presents nine studies of work-based psychotherapy or counselling related research. Each account sets out the focus and motivation of the study and critically discusses how the research design was developed, the choice of methods employed, with an explanation of the outcomes. A vital part of each account is a review of how the research has been used to make changes and developments in the work setting. Making Research Matter provides insights into the lived experience of the practitioner-researcher, to stimulate the reader to generate their own ideas for research enquiry. It presents a range of proven, successful research projects, and shows how they have made a difference in the development of theory and practice which lead to positive change, better services and more informed practice. It will be an essential resource for psychotherapists, counsellors, social workers, and those involved in coaching and clinical psychology.
