Basics of Acupuncture  
Gabriel Stux  
2013-11-11  
In 1987, our first book Acupuncture: Textbook and Atlas received rave reviews (e.g., in New England Journal of Medicine). This prompted us to write this smaller, affordable version in order to reach a wider audience. The smaller format has been so successful that we are now into our fourth revised edition. This has given us the opportunity to update and improve the book. For example, numerous new references to scientific advances have been added. Also the section on traditional Chinese medicine (TCM) was added because it gives a more complete picture of the current practice of acupuncture.

Acupuncture has come a long way since our first book in 1987. There has been a surge of interest in treating drug addictions by ear acupuncture in 450 centers worldwide. The treatment of nausea and vomiting has been so well tested (scientifically) that the FDA (USA) is considering making this the major indication for acupuncture in America. Research into its efficacy for neurological and pulmonary diseases is also gaining credibility. No longer is chronic pain the only scientifically acceptable use for acupuncture (based on the endorphin mechanism).

The Web That Has No Weaver  
Ted J. Kaptchuk 2000-05-02  
A Doody's Core Title for 2019! The Web That Has No Weaver is the classic, comprehensive guide to the theory and practice of Chinese alternative medicine. This accessible and invaluable resource has earned its place as the foremost authority in synthesizing Western and Eastern healing practices. This revised edition is the product of years of further reflection on ancient Chinese sources and active involvement in cutting-edge scientific research.

Chinese Acupuncture and Moxibustion  
Mao-Liang Qiu 1993  
A textbook of acupuncture and moxibustion from a highly respected Chinese specialist of Traditional Chinese Medicine (TCM). Qiu is also well known in Europe following lecture tours on these therapies. The text discusses acupuncture and moxibustion from a dialectic materialist perspective, in keeping with importance the contemporary Communist state places on TCM for all the people. The text has been expertly translated from the Chinese by Richard Bertshinger (author of the 'Golden Needle'). The original Chinese version of Chinese Acupuncture and Moxibustion was recently accepted by the All China Medical Board as the official teaching manual for students in China. Its scope and authenticity are unique among presently available Western textbooks. Comprehensive coverage includes: the more usual philosophy and history of Chinese traditional medicine.

Fundamentals of Chinese Medicine
Guangren Sun 2014-07-01
The
Fundamentals of Chinese Medicine is an international collaboration of Chinese medicine experts from both China and the west, and co-written by an experienced practitioner who has been teaching the subject in western schools. This book covers the theory of traditional Chinese medicine and discusses the topic in greater depth than any English language textbook available today. An abundance of classical references are also included here. The material in this text comprises course material for a professional course of training in TCM, which is also the basic material for studying and comprehension of other more advanced courses in TCM. The main contents include the physiological basis of essence-qi, yin-yang and the five phases, followed by the theories of essence, qi and blood, fluids, and spirit. Organ manifestation, channel and collateral theory, constitutional theory, etiology and patho-mechanism, and also principles of prevention and treatment are expounded upon. The knowledge in this textbook is approximately equal to that for students of TCM colleges in China, and coincides with the requirements in the Examination Syllabus for TCM Professional Practitioners Worldwide.

Textbook of acupuncture and moxibustion
Mao Liang Oiu 1985

The Story of Chinese Acupuncture and Moxibustion
Fu Wei-Kang 2003
Acupuncture and moxibustion are therapeutic methods characteristic in traditional Chinese medicine. They have a recorded history of more than 2,000 years. This book elucidates vividly and concisely the beginnings and development of these methods. It also describes how Chinese medical workers, following Chairman Mao's teachings, explore the legacy of Chinese medicine and achieve new breakthroughs in this branch of medical science. Acupuncture anaesthesia is also covered.

The Foundations of Chinese Medicine
Giovanni Maciocia 2005
This exciting new edition covers the theory of traditional Chinese medicine and acupuncture, and discusses in detail the function of the acupuncture points and principles of treatment.

Acupuncture Research
Hugh MacPherson 2007
This is the first book to set out a full range of research strategies for evaluating the clinical practice of acupuncture. Leading acupuncturists and researchers with international reputations share their expertise. They illustrate their descriptions with practical examples of what has worked and what has not. It outlines many of the key challenges in the field. These challenges relate to the nature of acupuncture and the gap between current research evidence and the actual experiences of acupuncturists in the field. By focusing the chapters on key research questions, rather than methods, the book has a user-friendly feel. Each chapter is easily accessible with brief explanations of research designs as well as vignettes of relevant past research. The book is based on a deep understanding of acupuncture, with its inherent complexity in practice, whether based on traditional principles or more modern concepts. By incorporating a more sophisticated understanding of the field, this book details a range of strategies aiming to develop the evidence base with the utmost rigour. It is the first book on acupuncture research to take this unique view, integrating the very best of evidence-based medicine with a genuine sensitivity to the discipline of acupuncture, from its traditional and holistic roots to its more modern interpretations.

World Century Compendium to TCM (a 7-Volume Set)
Hong-Zhou Wu 2013
Traditional Chinese medicine (TCM), with a history of thousands of years, is the crystallization of the ancient Chinese
people's experiences in their struggle against diseases. It is also an integral part of their splendid culture. Under the influence and direction of classic Chinese philosophies, it has undergone long-term medical practice and infiltrated into, as well as absorbed from, other subjects in that point in time, thus gradually evolving into a unique medical theoretical system that contributed and is still contributing significantly to the healthcare of the Chinese and the prosperity of the Chinese nation. This is the first of a 7-volume set encompassing all essential elements of TCM — ranging from Basic Theory, Diagnosis and Prescription to Chinese Materia Medica, Tui Na and Acupuncture. The basic theories of TCM are the theoretical foundations for guiding traditional Chinese preventive medicine and clinical medicine, and encompass aspects such as the philosophical foundation for TCM, understanding the effects of TCM on the physiology and pathology of the human body, and the principles in TCM for life cultivation, rehabilitation, diagnostics, and therapeutics. In this sense, the basic theories are regarded not only as an important part of TCM, but also as a compulsory course fundamental to the study and research of TCM. This book is compiled to allow the majority of readers to understand the theory of TCM and its methods of diagnosing and treating diseases in a relatively short period of time. It provides a brief introduction to the basic characteristics and theory of TCM, and a detailed schedule of learning commonly occurring diseases and patterns and their estimated 60 corresponding prescriptions. This is a great attempt in initiating more people to understand and apply the theory of TCM to diagnose and treat common diseases and provide corresponding formulas. This is the second of a 7-volume set encompassing all essential elements of TCM — ranging from Basic Theory, Diagnosis and Prescription to Chinese Materia Medica, Tui Na and Acupuncture. The 21st century is the start of an era where people are beginning to look at health and medical care from a different perspective. Understanding the conventional pattern of medical treatment alone has ceased to meet the ever-growing demands of social development, and hence, the trend of exploiting natural therapies has gradually emerged. Besides turning to Chinese medicine as an option for treatment, increasingly, the principles and practices used in this field have been garnering more interest. This is exactly the reason why this book is compiled. It is our hope that the contents can be of help to the readers to not only understand, but suitably apply Chinese medicine in practice, and thus benefit their health. This is the third of a 7-volume set encompassing all essential elements of TCM — ranging from Basic Theory, Diagnosis and Prescription to Chinese Materia Medica, Tui Na and Acupuncture. This book aims to provide readers with adequate knowledge for clinical application of Chinese medicine, which is in line with the fundamental principle of “correspondence of Chinese medicinals and patterns.” It contains a brief introduction to relative theories, divides these medicinals by actions into categories such as exterior-releasing, heat-clearing, purgative, dampness-dispelling, fluid retention-disinhibiting, interior-warming, qi-regulating, blood-invigorating, blood-stanching, food accumulation-relieving, phlegm, cough- and wheezing-arresting, mind-tranquilizing, liver-calming, orifices-opening, tonifying, astringing, and worm-dispelling, and elaborates each herb in terms of its actions, quality, indications, usage, and dosage. Furthermore, mnemonics and simple and effective formulas are included to help readers effectively grasp the concepts behind practical applications, and precautions and daily practices are specifically designed to support readers in easily understanding and retaining the information. This is the fourth of a 7-volume set encompassing all essential elements of TCM — ranging from Basic Theory, Diagnosis and Prescription to Chinese Materia Medica, Tui Na and Acupuncture. Chinese internal medicine is a
clinical subject which explains, using
traditional Chinese theories, the etiology,
pathology and therapeutic rules of the
diseases or syndromes belonging to internal
medicine. It is also the foundation for
learning and research in other clinical
branches of Chinese medicine, thus playing
a vital role in traditional Chinese medicine
(TCM). Chinese internal medicine has had a
long history. Its origins can be traced back
several thousand years. Through long-term
diagnostic and therapeutic practices, a rich
collection of experiences and theories in
Chinese internal medicine has been
accumulated and this has gradually evolved
into a complete, distinctive and effective
clinical branch. In recent decades, Chinese
internal medicine has also undergone more
significant developments, especially in the
treatment of cardiac or cerebral vascular
diseases, digestive tract diseases, renal
diseases and autoimmune diseases. In order
to popularize Chinese internal medicine and
allow readers to grasp its basic theories as
well as diagnostic and therapeutic methods,
we wrote this book in a language easily
comprehensible by the layman. For ease of
learning by modern doctors, we proceeded
from the current clinical practice and
outlined the contents with Western disease
names. There are more than 80 diseases
discussed in this book. For each disease,
the Chinese syndrome differentiation and
treatment as well as modern diagnostic key
points are provided, to make it more
convenient for the readers to study and
understand. The study of each disease
should begin from its etiology, pathology
and diagnostic key points, followed by the
differentiated patterns and corresponding
treatments. The respective points of caution
for each disease should also be well-noted.
Finally, the questions forming the “Daily
Exercises” are useful for readers to check
their comprehension and recall of the
material. Given the chance, the theoretical
knowledge should also be applied in clinical
practice so that past knowledge is tested
and new clinical knowledge and skills can
be learned. Indices to the prescriptions are
supplemented at the end so as to facilitate
study and consultation. This book is suitable
for those who are enthusiastic about TCM
and with basic medical knowledge, as well
as clinical TCM doctors, nursing personnel
and TCM students. This is the fifth of a 7-
volume set encompassing all essential
elements of TCM — ranging from Basic
Theory, Diagnosis and Prescription to
Chinese Materia Medica, Tui Na and
Acupuncture. With increased demands on
medical health care due to societal
developments, the sole dependence on
modern medicine or Western medicine is
clearly insufficient. Traditional Chinese
medicine, once derided by many in the
west, is now firmly in the global limelight
due to its numerous advantages in
preventing and treating diseases. Chinese
medicine achieves its curative effects by
making use of natural therapies such as
animal and plant parts, which are of
interest to many doctors and patients who
are in favor of rectifying the entire state of
the body. For over two thousand years,
Chinese medicinal formulas have been
extensively used in China as the main
technique to prevent and treat. The
accordance of formula and disease pattern
is the most specific, objective, stable, and
recurrently effective aspect of treatment
based on pattern differentiation, which will
be introduced in this book as a reliable
analytical method. In this book, the
fundamental concepts of Chinese medicine,
methods of conducting pattern
differentiation and composing principles of
formulas, and integration of indispensable
courses of Chinese medicine, such as basic
theories, diagnostic methods, Chinese
medicinals, formulas, treatment principles,
internal medicine, and warm diseases will
be discussed, opening a door for novices
who are interested to learn more about
Chinese medicine. Through self-study of this
book in a relatively short duration, it is our
hope that the reader will be familiar with
and preliminarily apply the basic theories of
Chinese medicine and formulas in practice.
This not only serves to prevent and treat
diseases, but more importantly, contributes
to the spread of traditional Chinese
medicine. This is the sixth of a 7-volume set encompassing all essential elements of TCM — ranging from Basic Theory, Diagnosis and Prescription to Chinese Materia Medica, Tui Na and Acupuncture. Acupuncture and moxibustion are one of the most important contributions our ancestors have made to humankind. In the narrow sense, acupuncture and moxibustion refer to medical therapy, whilst broadly, they are an integral science consisting of four subdisciplines: the subject of meridians and acupoints, the subject of acupuncture and moxibustion techniques, the subject of acupuncture and moxibustion therapy, and the subject of experimental acupuncture and moxibustion. This is the final of a 7-volume set encompassing all essential elements of TCM — ranging from Basic Theory, Diagnosis and Prescription to Chinese Materia Medica, Tui Na and Acupuncture. Traditional Chinese tui na, one of the earliest medical treatment methods with a long history tracing back to ancient times, is an important component of traditional Chinese medicine (TCM). This book is compiled with the aim of popularizing tui na modality along with allowing readers to understand and master the fundamental theories, basic techniques, commonly used acupoints and parts, and diagnosis and treatment methods of diseases in a relatively short period of time. The book is a summary of clinical experiences of tui na with practical contents and detailed illustrations, which can be easily appreciated and serve both purposes of the popularization of tui na and acupuncture.

This book provides a better understanding of the changing roles of non-governmental organizations (NGOs) in promoting sustainability of small and medium-sized enterprises (SMEs) in Peru. The book focuses on the domains of organic production, business social responsibility and sustainable production. The innovative study uses a combination of network and discourse analyses to identify the main patterns and shifts in the roles of NGOs in order to deal with sustainability and the market. Two major contemporary sociological theories - ecological modernization theory and network society theory - are applied to frame the analysis.

Acupuncture and Moxibustion Xiao Fei 2000 In Acupuncture and Moxibustion, acupoints are expounded comprehensively in aspects of their indications, theoretical bases of their use, present clinical applications and modern experimental study. Although there are 361 channel points, the commonly used ones in clinical treatment are less than half. Therefore, only the most frequently used points are selected. Analysis of functionally analogues points is presented as one section. This part attempts to clarify the main differences between acupoints for beginners. In addition, paring points and point distinction are discussed. Achievements of modern study of channels, cholaterals and acupoints are introduced respectively. These parts help readers get a deeper understanding of acupuncture. In order to facilitate study for Western readers, the treatment is based on Traditional Chinese Medicine Syndrome Identification while the diseases' names are taken from Western medicine. On the basis of introducing the fundamental acupuncture theory, much effort has been made to clearly explain some difficult and key points. Therefore, the book can be taken as a textbook for beginners as well as a reference book for those with a certain level of Traditional Chinese Medicine knowledge. Since practicality is the basic purpose in compiling this book and clinical applications are explained in details, the book will be very useful for all clinical medical workers. Pinyin-Chinese indexes of technical terms, acupoint names and source text are included for easy reference.

Biomedicine Bruce H. Robinson 2007 This beautifully designed two color book is filled with over 100 detailed illustrations to help the reader better understand the materials being presented. Red flag cases are included and clearly explained to help the practitioner decide when an immediate referral is necessary. This book covers...
many Western diseases you will encounter and is clearly written for practitioners of Chinese medicine. With this textbook you will learn the clinical presentation and treatment of the major diseases seen in Western medical practice today, and how to confidently interact with Western medical practitioners."--Publisher

The Classic of Supporting Life with Acupuncture and Moxibustion: Lorraine Wilcox 2014-06-10 The Zh n J u Z Sh ng Jng (The Classic of Supporting Life with Acupuncture and Moxibustion) by Wang Zhizhong as translated by Yue Lu (with editing by Lorraine Wilcox) is an absolutely phenomenal resource for the clinical use of acupuncture and moxibustion. This text stands out amongst many of the Classics for several reasons: the first of which is that Wang Zhizhong was a keen researcher, who would not only compare source materials against each other, but also cite which source materials he compared, and how they were the same or different. Secondly, while Wang was a gatherer of information, he was also practical, and this book is filled with his many many pearls of how he used a point prescription, why and what the results were of his own tests of the material. Thirdly, to date there is no other classical material which is as complete in subject matter as the Zh n J u Z Sh ng Jng. Wang categorized not only the point locations, and how to use the points with what method, but systematically collated 196 disease patterns from the most exterior down to the deepest levels, documenting multiple presentations and treatments for each pattern. Lastly, Wang's primary focus was on supporting or nourishing life through the use of these techniques, and therefore there are a significant number of these treatments that either use moxibustion as the primary treatment method, or use moxibustion after the primary treatment method. In the modern age, we are extremely lucky to have access to the classical sources for East Asian Medicine, and this is partly because of the hard work of translators like Yue Lu and Lorraine Wilcox.

**Acupuncture and Moxibustion as an Evidence-based Therapy for Cancer** William C.S. Cho 2012-10-13 Cancer is one of the leading killers in the world and the incidence is increasing, but most cancer patients and cancer survivors suffer much from the disease and its conventional treatments’ side effects. In the past, clinical data showed that some complementary and alternative medicine (CAM) possessed anticancer abilities, but some clinicians and scientists have queried about the scientific validity of CAM due to the lack of scientific evidence. There is great demand in narrowing the knowledge gap to explore the scientific and evidence-based knowledge of CAM in the anticancer field. With this aim, an unparalleled undertaking of a book series is launched to structurally consolidate this area. Although acupuncture and moxibustion have been practiced for millennia, they have come under scientific investigation only recently. Acupuncture and moxibustion have been used clinically to treat cancer-related symptoms (e.g. cancer pain, anxiety, depression and insomnia), manage treatment-induced side effects (e.g. hot flashes, nausea and vomiting) and enhance immunity (e.g. blood cell count, lymphocyte and natural killer cell activity). This is the first book manages to provide comprehensive and updated scientific evidence of the effectiveness of acupuncture and moxibustion intervention for cancer care. Laboratory and animal studies have uncovered the mechanisms of acupuncture and moxibustion for cancer therapy. Promising results of most clinical trials show the efficacy and safety of acupuncture and moxibustion in cancer management. This book consists of fifteen chapters which address a range of important aspects that will impact on the application of acupuncture and moxibustion. An overview of the safety and side effects of acupuncture and moxibustion for cancer care are also covered. In addition, the integration of acupuncture with Western medicine in cancer treatment and recent clinical trials are included as well. Opinion leaders around the world have teamed up to pursue a thorough and up-to-date review of the area, this volume will contribute great to the cancer, clinical and academic community by providing evidence-based information on the efficacy of acupuncture and moxibustion as an anticancer therapy.

**Practical Therapeutics of Traditional Chinese Medicine** Yan Wu 1997 The authors look at TCM treatments for a wide range of common & more difficult problems, such as: eczema; gangrene; depressions; palpitations; & many more. **Current Research in Acupuncture** Ying Xia 2012-08-09 Written by over 60 scientists and clinicians from the United States, mainland China, Germany, Australia, Japan, Sweden, Portugal and Hong Kong, Current Research in Acupuncture discusses recent advances in acupuncture research in a modern scientific language. The first 5 chapters investigate the basic mechanisms of acupuncture. Later chapters explore topics including acupuncture treatment and potential mechanisms for epilepsy, Parkinson’s diseases, neurodegenerative disorders such as Alzheimer’s disease,
vascular cognitive impairment, aging, anxiety, polycystic ovary syndrome, pain, nerve root cervical spondylosis, stroke, inflammation, myocardial ischemia and other cardiovascular diseases. Following the translational and clinical discussions, 4 chapters present new prospects for acupuncture theories and applications. The final chapter comments on the pitfalls and problems of the previous studies and suggests direction for future research towards in-depth understanding of acupuncture, along with better application of acupuncture in modern medicine. Each chapter is written by one or more experts in the field. This unique book provides a broad perspective on the principles of acupuncture for acupuncture researchers and neuroscientists. The laboratory and clinical investigations of various acupoints and optimal conditions provide unique clues to acupuncturists for improved clinical efficacy. For a medical student, this book is a modern course in ancient Traditional Chinese Medicine, especially acupuncture. Ying Xia, the chief editor, is Professor and Vice-Chairman of the Department of Neurosurgery at The University of Texas Medical School in Houston, Texas, USA. Guanghong Ding is Professor in the Department of Mechanics and Engineering Science at Fudan University and Director of Shanghai Research Center for Acupuncture and Meridians, Shanghai, China. Gen-Cheng Wu is Professor of Neurobiology; Chairman, Department of Integrative Medicine and Neurobiology; Director, Institute of Acupuncture Research; and Director, WHO Collaborating Center for Traditional Medicine, at Shanghai Medical College of Fudan University, Shanghai, China.

**Bridging The Gap: Integrative Oncology And The Practice Of Traditional Chinese Medicine** Bianca Di Giulio 2020-08-24 The book’s inherent value, currently, is in its uniqueness. There are few books on Integrative Oncology (IO). There are few books on the entirety of traditional Chinese medicine in the treatment of cancer. There are even fewer, if any, books that deal with the topics of Integrative Oncology and the use of traditional Chinese medicine as a whole in the treatment of people with cancer. While very broad and deep topics, this makes for a varied audience of interest that includes not just the TCM practitioner or student, but Western health practitioners and patients as well as laypeople interested in the topic of oncology. For those interested in the topic of IO, it gives one of the few non-biased, honest and critical views of the state of IO in contrast to what is promoted by various institutions and societies. For the Western health practitioner and/or patient, many of whom are completely unfamiliar with TCM and how it works or can be used, it provides information on the breadth of TCM and how it can be applied in various ways to help improve outcomes. For the TCM practitioner or student, it provides much needed information on how to go about caring for a patient with cancer to include clinical pearls and important Western medical information and terminology.

**Fundamentals of Chinese Medicine** Nigel Wiseman 1995 This revised edition includes a glossary of terms and a materia medica and formulary sufficient to practice the treatments described in the text. Single Point Acupuncture and Moxibustion for 100 Diseases
Decheng Chen
2010
Single Point Acupuncture and Moxibustion for 100 Diseases is a comprehensive yet easy-to-follow guide to the clinical application of single point acupuncture and moxibustion therapy, with a special emphasis on methods and needle techniques. Single point acupuncture and moxibustion therapy differs from other forms of acupuncture in that only one point is selected during each session. The single point technique is noted for its quick therapeutic response and exceptional results, despite using far fewer points than traditional acupuncture therapy. It is a simple technique for practitioners to master, and patients are quick to extol the virtues of the single-point approach. Author Dr. Decheng Chen describes in detail how to treat one hundred of the most common clinical ailments, including headaches, neck pain, hypertension, and even the common cold. Dr. Chen uses both Western and traditional Chinese medical theory to describe his treatment methods. Each section consists of an introduction to the disease, a detailed explanation of the needle technique used, a case study of the treatment, and a discussion. With its easy-to-use format and step-by-step instructions, Single Point Acupuncture and Moxibustion for 100 Diseases is the definitive single point acupuncture guide for teachers, students, and acupuncture practitioners alike.
